

# DANNIEL ROLFE

FULL STACK DEVELOPER

## <> DEVELOPMENT SKILLS

- Javascript ES6
- NodeJs/Express/Koa
- React/Angular 4
- Redux
- Php/Laravel
- Typescript
- RESTful Api
- TDD/BDD
- Enzyme
- HTML5
- CSS3/Sass
- Gulp/Webpack
- Git
- AWS
- Docker
- MySQL/NoSQL
- Jasmine/Karma

## UX/UI DESIGN SKILLS

- Prototyping
- Wireframing
- User Interface Design
- Information Architecture
- A/B, Card Sort, User Testing
- Analytics

## TOOLS

- Axure
- Photoshop
- Google Analytics
- Jira
- Invision/Sketch
- Illustrator
- Vim/IntelliJ
- Slack

## EDUCATION

Bachelor of Business Administration  
Portland State University 2008-2012

T. 971.713.1358

E. [talkto@danielrolfe.com](mailto:talkto@danielrolfe.com)

W. [danielrolfe.com](http://danielrolfe.com)

G. <https://github.com/rolfed>

The focus of my work is making complex interfaces and concepts more intuitive and engaging, without compromising the integrity of the design.

## + EXPERIENCE

### Full Stack Developer / The Standard / Aug 2017 - Current

At The Standard, I was responsible for moving the company off of outdated legacy web technology onto a fully open-source stack, working on the frontend, build tools, and backend. The project that I contributed to included consuming REST APIs, implementing user interface features, behavior driven tests, and collaborating and educating stakeholders.

### Front End Developer / 17hats / Mar 2017 - June 2017

At 17hats, I was responsible for the development of various features in Javascript. I collaborated with a team of seven developers in an Agile environment. The projects that I contributed to include integrating Userve's API, refactoring and implementing a new design of the cancellation process, implementing various changes to the marketing website, and fixing bugs, which required learning the legacy code written in Pearl, Ruby and writing SQL queries. I collaborate with the customer support team to help streamline bug fixing.

### Full Stack Developer / Manifest / Sep 2016 - Feb 2017

At Manifest, I was responsible for the development of several applications in NodeJS, AngularJS, and Laravel. I collaborated with a team of five developers in an Agile environment. The projects that I contributed to include a data watermarking application, a custom e-commerce website, and an E-Learning platform used by over 50,000 students to date. In addition, I contributed to the company by designing rapid prototypes, wireframing concepts and designing user interfaces.

### UX Developer / Oregon Catholic Press / May 2016 - Aug 2016

At the OCP, I was responsible for the user experience design and front-end development of the company's e-commerce website. I collaborated with and guided the marketing and art department in various user experience exercises that resulted in an improved user interface. In service of this initiative, I managed a team of two front-end developers using Agile development methodologies. I was responsible for numerous efforts including making technology recommendations, collaborating with the backend development team, and leading the user experience efforts and interface design.

## PROJECTS

### **MFA Login Portal** / The Standard

Stack: Java, Angular 4, Javascript, Bootstrap, SASS, MySQL, Linux, Apache

#### **Accomplishments:**

- Built the front-end in Angular 4
- Consumed Rest APIs
- Behavior driven development, unit testing, and integration testing

### **Sitka Application** / Sitka Center for Art and Ecology

Stack: Node, Express, React, Javascript, Bootstrap, SASS, NoSQL, Linux, Docker

#### **Accomplishments:**

- Built the front-end in React
- Consumed Rest APIs
- Behavior driven development, unit testing and intergration testing

### **Select Sales** / Manifest Web Design

Stack: NodeJs, AngularJs, GulpJs, Javascript, MySQL, Linux, Apache, AWS, Docker, and Ubuntu

#### **Accomplishments:**

- Rebuilt the front-end in AngularJs
- Added new features to the front-end and fixed bugs
- Integrated back-end API's with the front-end
- Configured the AWS production server and dockerized the application

### **Risq Energy** / Manifest Web Design / Live Site: <http://risqenergy.com>

Stack: Laravel, AngularJs, SASS, Webpack, Sass, Stripe API, Docker, and Ubuntu

#### **Accomplishments:**

- Designed and built the e-commerce website
- Implemented back-end API endpoints and front-end UI
- Built the ecommerce experience from the ground-up
- Dockerized and deployed the application to Digital Ocean

### **Acxiom** / Manifest Web Design

Stack: NodeJs, AngularJs, Bootstrap, MySQL, and GruntJs

#### **Accomplishments:**

- Contributed to the Angular front-end development

### **Oregon Catholic Press** / Creative Circle / Live Site: <http://www.ocp.com>

Stack: Laravel, Bootstrap, Sass, Javascript, GulpJs, and Ubuntu

#### **Accomplishments:**

- Responsible for the front-end development of the ecommerce website
- Managed two front-end developers and assigned tasks
- Collaborated with a team of 10 developers and system administration professionals
- Provided UX/UI direction to the executive team
